

## Grid section

**Snap to grid** activates the snap function.

**Visible grid** displays grid points on the screen. These points are not printed.

## Resolution and subdivision sections

Here you can set the unit of distance for the spacing between horizontal and vertical grid points and subdivisions (intermediate points) of the grid.

**Synchronize axes** changes the current grid settings symmetrically.

## Default colors for charts

Use **Tools > Options > Charts > Default Colors** to change the default colors used for charts or to add new data series to the list provided.

To add new colors to the choices, see “Adding custom colors” on page 503.

To change the default color for a data series, select it in the left-hand column and then click on the required color in the color table.

To add another data series, click **Add**, then select the new series and click on the required color.

Click **Default** to restore the color settings that were defined when the program was installed.
