- 9) Select the entry for the current document in the *Save Macro In* area. As the current document in this example has not been saved, it is referred to by its default name *Untitled 1*.

Documents that have been saved include a macro library named *Standard*. This library is not created until the document is saved or the library is needed, so at this point in the example procedure your new document does not contain a library. You can create a new library to contain the macro you have just created, but this is not necessary.

- 10) Click the **New Module** button. Calc displays the New Module dialog (Figure 430). Type a name for the new module or leave the name as the default *Module1*.
