

Figure 489: Calc options for highlighting changes

## Compatibility

The *LibreOffice Calc - Compatibility* page provides a quick way to switch between LibreOffice's default key bindings and OpenOffice.org's legacy default key bindings for Calc. Most of the defaults are identical, but there are some differences.

The actions associated with the two key binding choices are shown in the table below.

Key Binding	Default	OpenOffice.org legacy
<i>Backspace</i>	Opens Delete Contents dialog	Immediately deletes contents
<i>Delete</i>	Immediately deletes contents	Opens Delete Contents dialog
<i>Control+D</i> ( <i>Command+D</i> on macOS)	Fills cell content down within selection	Opens the Selection List dialog
<i>Alt+DownArrow</i> ( <i>Option+DownArrow</i> on macOS)	Select header of range; no action in empty cell	Increases row height

## Grid options

The *LibreOffice Calc – Grid* page defines the grid settings for spreadsheets. Using a grid helps you determine the exact position of any charts or other objects you may add to a spreadsheet. You can also set this grid in line with the snap grid.

If you have activated the snap grid but wish to move or create individual objects without snap positions, you can press the *Ctrl* key to deactivate the snap grid for as long as needed.
