Calc displays the Select Source dialog (Figure 246), where you can choose between using the selected data cells, a range of cells that has already been named, or a data source that has already been registered with LibreOffice.

✅ **Note**

> See Chapter 13, Calc as a Database, for more information about named ranges. See Chapter 10, Linking Data, for more information about linking to registered data sources.

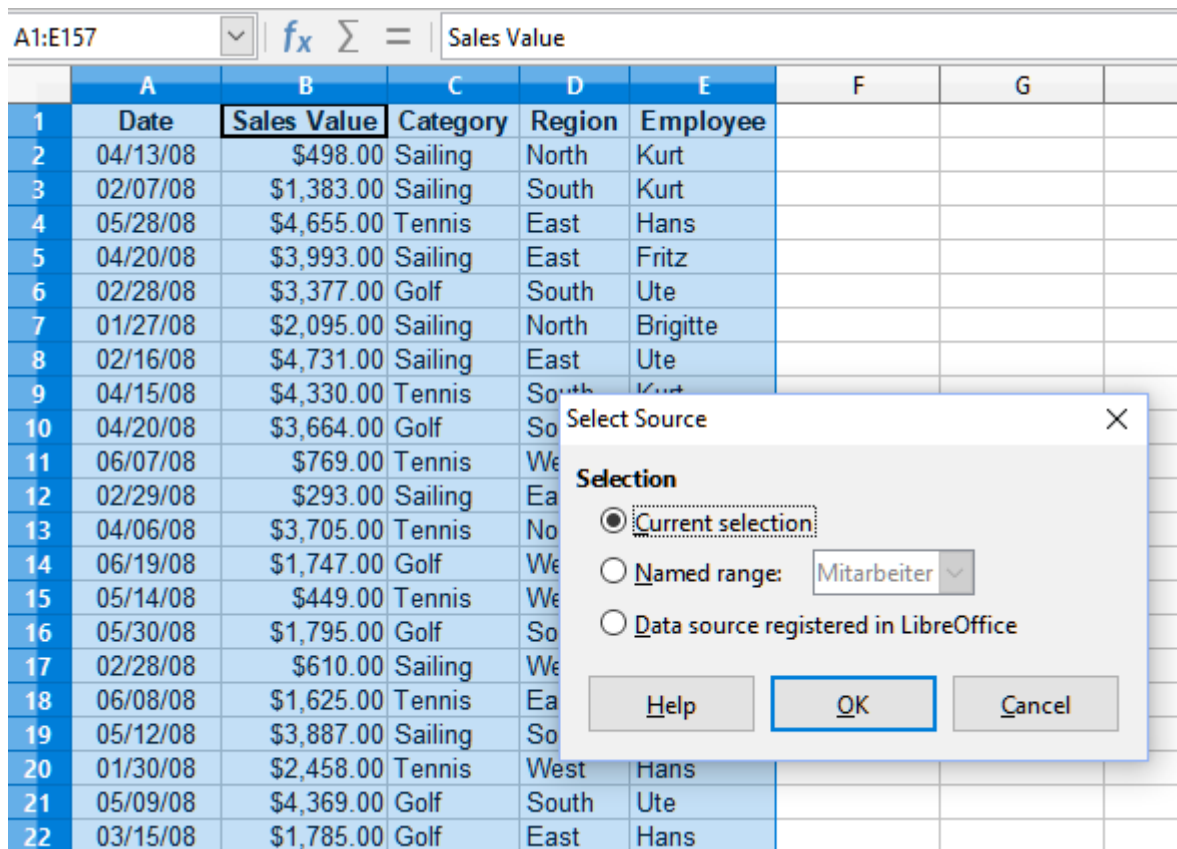

Figure 246: Select Source dialog

Click **OK** on the Select Source dialog to display the Pivot Table Layout dialog, which is described in the next section.

The Pivot Table Layout dialog

The function of the pivot table is managed in two places: first, in the Pivot Table Layout dialog; and second, through manipulations of the result in the spreadsheet. This section describes the Pivot Table Layout dialog in detail.

ℹ️ **Tip**

> To access the Pivot Table Layout dialog again after initial creation of a pivot table, left-click in any cell of the pivot table. Then select **Insert > Pivot Table** on the Menu bar, or select **Data > Pivot Table > Insert or Edit** on the Menu bar, or click the **Insert or Edit Pivot Table** icon on the Standard toolbar, or right-click in any cell of the pivot table and select the **Properties** option in the context menu.
