

Look on the *Outline & Numbering* tab (Figure 376) of this dialog to see what outline level Heading 1 is assigned to. Usually this will be **Outline level: Level 1**. The level cannot be changed here because it has been set in **Tools > Chapter Numbering**.

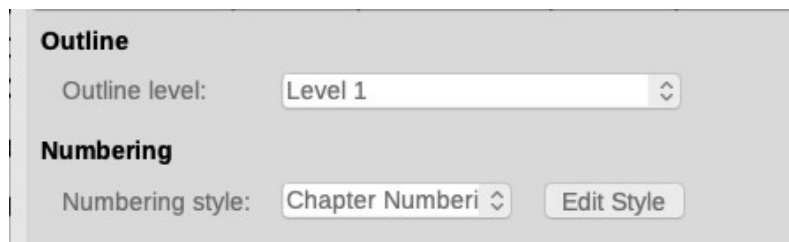

Figure 376: *Outline & Numbering* tab of Paragraph Style dialog for Heading 1

Only one paragraph style can be assigned to Outline Level 1 through **Tools > Chapter Numbering**. However, you can assign additional paragraph styles to any outline level by using the *Outline & Numbering* tab on the Paragraph Style dialog.

Therefore, you want to define a style called *Heading 1 Chapter 1* that is identical in appearance to *Heading 1* but has one essential difference:

- 1) Right-click *Heading 1* in the *Paragraph Styles* section of the *Styles* tab in the Sidebar, and select **New**. On the *Organizer* tab of the Paragraph Style dialog, name the new style, select the next style, and be sure **Inherit from** shows *Heading 1*.

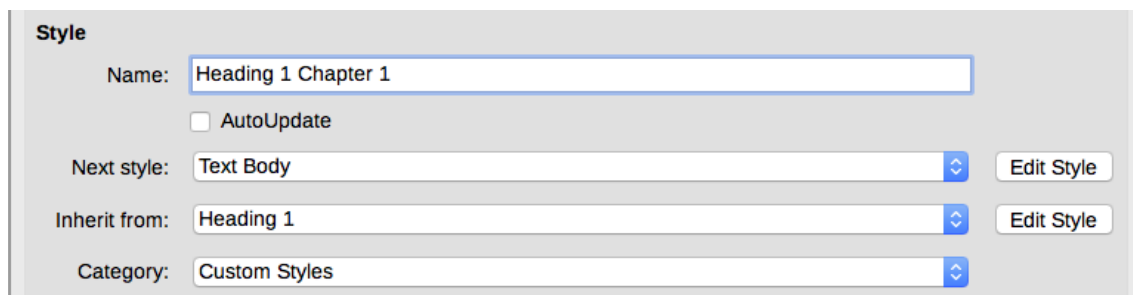

Figure 377: *Organizer* tab for the new style

- 2) On the *Text Flow* tab, in the *Breaks* section (Figure 375), select **Insert**, **Type: Page**, **Position: Before**, **With Page Style: First Page**, and **Page number: 1**.
- 3) On the *Outline & Numbering* tab, set the **Outline level** to *Level 1* (Figure 378). This ensures that the heading will appear in the Table of Contents along with the other chapter headings. The **Numbering Style** for this heading is *None*, as it was not assigned an outline level through the Outline Numbering dialog.

- 4) Now, assign the new style to the first paragraph of Chapter 1, and you're done.
