

Figure 163: Signatures can have a description

A signed document shows an icon in the Status bar. You can double-click the icon to view the certificate. More than one signature can be added to a document.

Changing an existing description invalidates the signature. However, multiple signatures from the same author are allowed, because each signature can have a different description.

## Including a signature line

You can generate a graphic box representing a signature line using **Insert > Signature Line** (see Figure 164), and you can optionally sign the signature line using a digital certificate.
