

Changes to the system input language/keyboard normally affect text typed into a document after the change. If you do not want this to happen, select **Ignore system input language**; new text will then continue to follow the language of the document or the paragraph, not the system language.

If necessary, select the options to enable support for Asian languages (Chinese, Japanese, Korean) and support for CTL (complex text layout) languages such as Hindi, Thai, Hebrew, and Arabic. If you choose either of these options, the next time you open the Options dialog, you will see some extra pages under Language Settings. These pages are not discussed here.

Choose spelling and grammar options

To change the options for checking spelling and grammar, use the *Language Settings > Writing Aids* page (Figure 449).

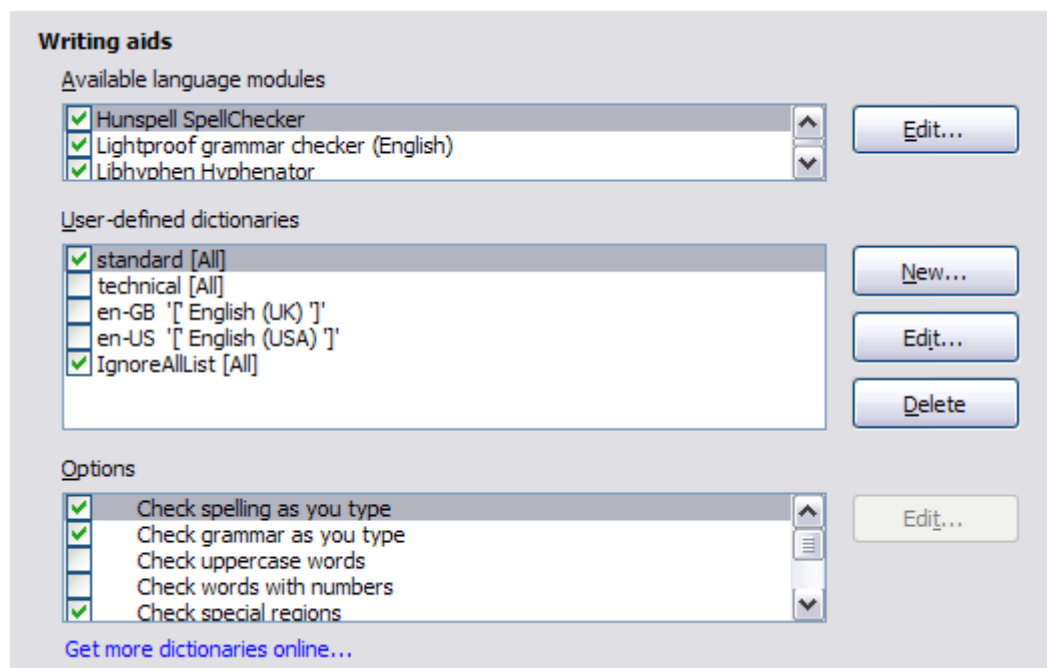

Figure 449: Choosing languages, dictionaries, and options for checking spelling

Some considerations:

- If you do not want spelling checked while you type, deselect **Check spelling as you type**. (You can over-ride this setting in a document using **Tools > Automatic Spell Checking** on the Menu bar or the **Toggle Automatic Spell Checking** icon on the Standard toolbar.)
- If you want grammar to be checked as you type, you must have **Check spelling as you type** enabled too.
- **Check special regions** means that text in headers, footers, frames, and tables are also checked when checking spelling.

Here you can also select which of the user-defined (custom) dictionaries are active, add a new custom dictionary, edit dictionaries, and delete custom dictionaries. Dictionaries installed by the system cannot be deleted.

Tip

When checking spelling, words marked “Add to Dictionary” are added by default to the Standard dictionary. Words marked “Ignore All” are added to the IgnoreAllList dictionary. See Chapter 2, Working with Text: Basics.
