

To link one frame to another:

- 1) Select the frame to be linked from.
- 2) Click the **Link Frames** icon on the Frames toolbar.
- 3) Click the next frame in the series (which must be empty).

When a linked frame is selected, any existing links are indicated by a faint connecting line, as shown in Figure 117. Frames can be unlinked by selecting the **Unlink Frames** icon on the Frames toolbar.

Figure 117: Linked frames

The height of a frame that is being linked from is fixed; you can change this height manually or by using the Frame dialog, but it does not automatically adjust to the size of the contents (that is, the `AutoHeight` attribute is disabled). Only the last frame of a chain can adapt its height to the content.

The *Options* page of the Frame dialog (Figure 118) shows the names of the selected frame and any frames it is linked to or from. You can change this information here. On this page, you can also select options to protect the contents, position, and size of the frame.

The *Wrap*, *Borders*, *Area*, *Columns*, *Transparency*, and *Macro* pages of the Frame dialog are the same as those for frame styles. Refer to Chapter 9, *Working with Styles*, for details.
