

## Finding free-licensed fonts

In addition to proprietary fonts from sources like Adobe, hundreds of free-licensed fonts are available. You can use, share, and edit free-licensed fonts as you please. Most are available at no cost. Many are clones or near-variations of classic fonts, but some are original fonts.

Many Linux distributions include a few free-licensed fonts in their package repositories. Other places where you can find free-licensed fonts include The League of Moveable Type (<https://www.theleagueofmoveabletype.com/>) and the Font Library (<https://fontlibrary.org/>).

## Adding custom colors

---

To add custom colors to a color palette, for example to exactly match a corporate color scheme, follow this procedure:

- 1) Insert any drawing object, such as a square, into any document.
- 2) Right-click on the object and choose **Area** on the context menu.
- 3) Go to the *Color* tab (Figure 462). Under **Colors > Palette**, choose which palette you wish to add the new color to. Under *New*, define the new color using RGB or Hex notation, or click the **Pick** button to select the color on the Pick a Color dialog (Figure 463).

Figure 462: Defining a new color

- 4) Click **Add** in the lower left corner, enter a name for the new color in the pop-up dialog, and click **OK** to save.
- 5) Delete the drawing object from the document, if it is not needed.
