Figure 403: Creating a section to be hidden when a specified condition is met

Change the value of the variable

To change the value of the variable between *Lite* and *Pro*:

1) Find the variable field you created in "Choose or define a variable" on page 376.

2) Click once just in front of this field, then right-click and click **Fields** in the context menu.

3) On the Edit Fields dialog (Figure 404), change the value of the variable to *Pro*.

4) If you have set fields to update automatically, all of the conditional and hidden text that uses this variable as a condition will change.

✅ **Note**

Conditional text and hidden text can only be edited in the Edit Fields dialog.

ⓘ **Tip**

To turn on automatic updating of fields, choose **Tools > Options > LibreOffice Writer > General**, and select **Fields** under **Automatically Update**.
