3) A browser window opens. Find and select the extension you want to install and click **Open**.

4) Users with administrator or root privileges will see a dialog where they can choose to install extensions "for all users" (shared) or "only for me" (user). Users without those privileges can install, remove, or modify extensions only for their own use.

5) The extension begins installing. You may be asked to accept a license agreement.

6) When the installation is complete, the extension is listed in the Extension Manager dialog.

To install an extension that is not listed in the repository, download the extension, then continue with step 3 above.

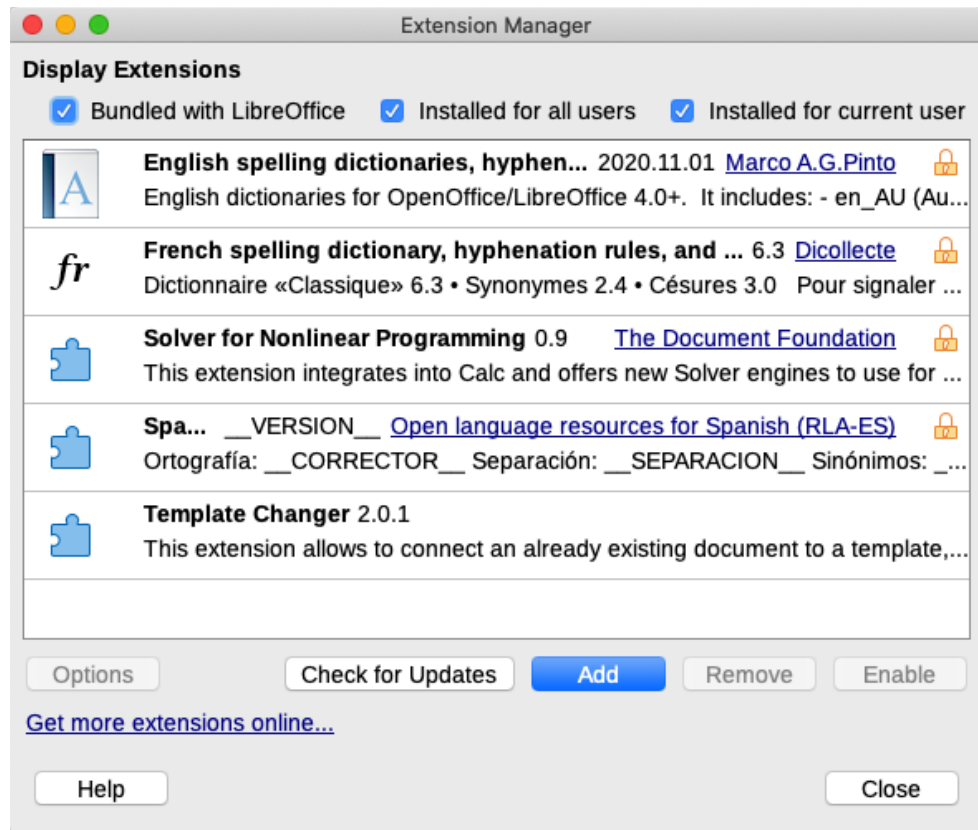

Figure 461: Using the Extension Manager

Removing and disabling extensions

To remove (uninstall) an extension that you installed, select the extension in the main window of the Extension Manager dialog and click the **Remove** button.

To disable an extension without removing (uninstalling) it, select the extension in the main window of the Extension Manager dialog and click the **Disable** button, which then changes to **Enable**.

Adding fonts

LibreOffice supports PostScript (.pfb), TrueType (.ttf), and OpenType (.otf) font file formats. Other font formats exist, and may be supported by your operating system, but these formats may be limited in selection and quality.

If you have administration privileges, you can install additional fonts through your operating system; they will then be available for use by LibreOffice and will appear in Writer's font lists.
