Generating a QR code

A QR code (short for Quick Response code) is a type of barcode. QR codes often contain data that points to a website or application. Writer, Calc, Impress, and Draw can generate QR codes.

1) Choose **Insert > Object > QR Code** on the Menu bar to open the QR Code Generator dialog (Figure 265).

Figure 265: QR Code Generator dialog

2) Fill in the *URL/Text* field, select a correction factor (the complexity of the graphic generated), and the width of the border around it, then click **OK**. Figure 266 shows the code generated by the input in Figure 265.
